

Green Practices

myhotels group have adopted a sound, sustainable environmentally friendly approach over the years, moving towards more socially responsible practices throughout the years.

- All General Managers of myhotel Bloomsbury, myhotel Chelsea and myhotel Brighton use dedicated G-Wiz electrically powered vehicle, powered solely by electricity.
- All hotels recycle paper, cardboard, cartons, glass and plastics.
- Cards are placed in guestrooms to encourage and have the option of re-using bath sheets and towels.
- Energy saving light bulbs used in electrical fittings where possible. Lighting and equipment is switched off when not in use.
- When sourcing suppliers we make a point of asking about their own green policies – suppliers in all areas – Food & Drink, Stationery for the hotels, etc.
- In that respect we use Belu water myhotel Bloomsbury & myhotel Chelsea – bottled mineral water sourced and bottled in Britain. All the profits go towards funding water projects in Britain and around the world.
- Aveda blends supplied in our dedicated treatment rooms – jinja. Treatment spaces have a significant drive on providing recycled packaging for all their products. The bottles in which the products are provided contain 80/90% post-consumer recycled material.
